

MORE FROM WOOD.

Feelwood Halifax Oak Decors

Strikingly Authentic, Surprisingly Sustainable

Discover a sustainable decorative surface with a remarkable authentic look and feel.

The Halifax Oak decors in EGGER's embossed-in-register (EIR) Feelwood range delivers **convincingly authentic wood looks that rival nature's version**, with dramatic knots, distressing and deep cracks. The surface texture flawlessly aligns with the striking woodgrain design, thanks to EIR technology, delivering reproductions with a decidedly authentic look and feel. These decors are not only stunning, but also sustainable.

Feelwood thermally fused laminate (TFL) panels offer **considerable benefits compared to real wood**. They are:

- Durable, with fade and scratch resistance
- Easy to clean and care for due to the nonporous, sealed surface
- Sustainably produced with pre- and consumer post-recycled and waste wood
- Decor matched—in surface color, pattern and texture—with EGGER laminates and edge banding (longitudinal and end grain) for seamless integrated design concepts

With our three top-selling Halifax Oak decors (H1176 ST37 White Halifax Oak, H1180 ST37 Natural Halifax Oak and H1181 ST37 Tobacco Halifax Oak) **now being produced** in Eurodekor TFL Particleboard **at our North Carolina plant**, you'll also have the advantages of:

- **Product Availability:** Products will be stocked and available for projects as needed
- **Design Flexibility:** Different thicknesses equal more design options, and our 1/4" panels are perfect for 5-piece cabinet doors
- **Environmental Benefits:** Reduced Transport Carbon Impact

The other three Halifax Oak decors (H3176 ST37 Pewter Halifax Oak, H3180 ST37 Brown Halifax Oak and H3182 ST37 Black Halifax Oak) will continue to be stocked at our North Carolina plant, but, as an imported product, will only be offered in 3/4" thickness.

All our shown and mentioned decors are reproductions.

Deliver Solid Wood Looks with End Grain Edge Banding

Pair Feelwood Halifax Oak decors with matching End Grain Edge Banding to create the look of solid wood for even greater realism. End Grain Edge Banding delivers the appearance of cross-cut annular tree rings, reproducing the look of sawn timber. EGGER's Decor Match System ensures an ideal match in color, pattern and texture with our TFL, laminates and edge banding (longitudinal and end grain).
