

# These instructions apply to PerfectSense Gloss and PerfectSense Matt surfaces.

## What should I do on a daily basis to keep the surface looking good?

- Always wipe off any moisture immediately, including water, as prolonged exposure may affect the surface.
- Always wipe up any splashes or spillages before they dry on the surface.
- Light soiling from daily use may be removed with a soft cloth moistened with warm water.
- Wipe the surface dry with kitchen roll to avoid leaving streaks.
- Pay particular attention to areas around the cut-outs and joints.

## What should I use to remove heavier soiling of the surfaces?

- Clean the surface with a soft cloth, soft sponge or soft brush, moistened with warm soapy water.
- Wipe clean with a soft cloth, moistened with clean warm water.
- Dry the surface with a clean, absorbent cotton cloth, or kitchen roll, to avoid leaving streaks.

### If required, follow this process:

- Wipe with a neutral household cleaning product that does not contain abrasive ingredients.\*
- Wipe off any residual cleaning product with warm water.
- Dry the surface with a clean, absorbent cotton cloth, or kitchen roll, to avoid leaving streaks.

For more stubborn dirt, such as felt pen, old grease or shoe polish, a standard vinegar-based glass cleaning agent can be used. As above, always remove any residual cleaning agent with clean warm water before drying with kitchen roll.

\* You should always test any cleaning product on a small area of the PerfectSense surface before using.

## What should I definitely not use to clean the surface?

The following cleaning products should **NOT BE USED** as they will damage the surface:

- Scouring pads, abrasive powders, steel wool and microfibre cloths.
- Bleach, furniture polish and washing powder.
- Cleaning products containing strong acids and strong acid salts.
- Harsh chemical solvents or substances, such as alcohol and ammonia.
- Steam cleaning machines.

## **Disinfectants**

The wide variety of products available on the market makes it impossible to give an overall assessment of which ones may damage the surface. This is why we always recommend that any disinfectant is tested on a small area of the PerfectSense surface before using.
